

HP and edisolve

Healthcare Integrator

A modular EDI healthcare transaction processing and management system designed for HIPAA-covered stakeholders.

Ease revenue cycle processing

Driven by the transaction and code set mandates of the Health Insurance Portability and Accountability Act of 1996 (HIPAA), the healthcare and financial communities are increasingly implementing real-time systems that provide a reliable electronic data interchange (EDI) gateway for the processing of healthcare transactions.

Healthcare integrated

edisolve works closely with customers to analyze business requirements and deliver solutions customized to their unique EDI integration projects.

Healthcare Integrator features include lifecycle management, online data collection and delivery, batch processing, trading partner management, and real-time statistics.

The product handles revenue cycle transactions in either standard or legacy formats plus related transactions such as acknowledgements, eligibility, referrals, enrollment and premium payments.

edisolve's EDI management and workflow processing simplifies activities such as translations, validations, file management, file transfers, routing and data warehousing.

Solution benefits

- Runs on the HP NonStop server for fault tolerant operation
- Process architecture allows each connection and workflow to be individually scaled.
- A wide range of internal and external communication channels are supported.
- Available for a range of open, scalable hardware and operating system platforms
- User exits are available anywhere in the workflow process.

Working together with HP

The convergence of bioscience innovations, increasing healthcare costs, the aging population, technology adoption and individuals demanding more empowerment over their health management is pressuring the health and life sciences industry to transform. We partner with HP to deliver provider solutions that address costs, improve quality of care, and transform the way health is managed and delivered.

Reduce operational cost

Our experience, combined with our innovative technology and exceptional service, allows organizations to implement projects faster, reduce cost, create new revenue opportunities, adapt to change and achieve return on investment (ROI) earlier.

Using Healthcare Integrator with its workflow processing positions the proper business logic in place and automates routine business tasks. The heart of the system is its capabilities for monitoring all activity within the network. Monitoring tools give organizations the ability to comprehend information throughout the system at any given moment, and provides a unified view of its business.

Healthcare Integrator works to remove the complexity inherent in HIPAA processing standards, creating straight-through connectivity between trading partners and enterprise applications. Combining Healthcare Integrator capabilities and integration functions within a single solution framework results in simplified implementations, streamlined operations and reduced costs.

HP products supported

Our solutions are supported on a broad range of HP servers across both RISC and/or Intel® architectures. From blades and clustered servers to high-powered, 64-bit, multi-processor super-computing, HP servers set the standard for performance, scalability, availability and manageability. With their industry-leading innovation and value, HP servers are the ideal choice to meet your most demanding business needs.

Operating systems supported

Our solutions applications are optimized for HP Integrity NonStop servers, the gold standard for business continuity. Known for running the world's most demanding enterprise applications, this massively scalable platform offers the lowest total cost of ownership (TCO) in its class. With this platform, HP has combined the highest levels of availability and service with standards including the Intel Itanium® 2 processor, Microsoft® SQL, web services and the J2EE software architecture.

Service and support

Working with HP Services, we provide you with a complete portfolio of services tailored to your unique business and IT needs. We leverage the proven methodologies and expertise of over 65,000 HP Services professionals around the world to help your company design, build, integrate, manage and evolve an infrastructure that lets you respond to business changes easily and cost-effectively.

Building on the value of strong relationships

By working with HP, we have the resources, experience and knowledge of an industry leader to ensure our solution delivers the business results and value your company requires. HP is a company that thrives on innovation, with a proven track record of success in virtually every market, customer segment and region worldwide. Together, we have the technology and services to meet your most demanding needs.

edison solutions are tightly integrated with HP servers and databases to provide a real-time architecture and enterprise for healthcare processing. HIPAA stakeholders that use HP servers and edison software can improve service levels, reduce costs and enable fast deployment of new healthcare services.

Working together to drive success

By combining standards-based and modular technologies with our leading-edge applications and a full portfolio of services, you gain a powerful, flexible solution that meets your business needs today—and adapts dynamically as those needs change. That's the foundation for building an agile, responsive enterprise to drive better business outcomes for your long term success.
